WORK EXPERIENCE

Freelance Full-Stack Web Developer, Self-Employed Jan. 2024 - Present

- Developed custom Laravel web applications, including POS, clinic, HR, recruitment, reservation, and municipal assessor assessment systems.
- Integrated third-party technologies such as PayMongo payment processing, facial recognition attendance, and GIS mapping using Leaflet and QGIS.
- Collaborated with clients to deliver customized web solutions tailored to their business needs.

Intern, University Information Systems and Analytics (UISA) Jan. 2026 - May 2026

- Deployed the Bargo System to the external campus of Southern Leyte State University (SLSU), ensuring full operational readiness and a smooth rollout for end users.
- Resolved system bugs, improving web performance, stability, and overall user experience.
- Managed sales tracking and inventory data, enabling accurate monthly report generation

Student Assistant, University Information Systems and Analytics (UISA) Aug. 2024 - Dec. 2024

- Improved reservation accuracy and operational efficiency by enhancing booking workflows and automating receipt generation in the Bargo System.
- Resolved critical frontend issues, resulting in a smoother, more responsive user experience.

EDUCATION

2022 - 2026

Bachelor of Science in Information Technology - Major in Programming (Cum Laude)
Southern Leyte State University, Sogod, Southern Leyte, Philippines

TECHNICAL SKILLS

Programming Languages	PHP, Python, JavaScript, C#, Java
Tools/Frameworks	Laravel, React Js, Postman, MySQL Workbench, Git, GitHub, Roboflow
Databases	SQL, MongoDB
Other Skills	Problem-solving, Collaboration, Adaptability

PROJECTS

Municipal Assessor Assessment System

Laravel, MySQL, JavaScript, Bootstrap, Ajax, jQuery, QGIS, Leaflet

- Developed a web-based assessment and parcel management system for organizing land records and property information.
- Implemented GIS-based parcel visualization and automated declaration generation to improve mapping accuracy and reporting efficiency.

SoilSnap – Automated Soil Classification and Identification System

MERN Stack (MongoDB, Express.js, React, Node.js), YOLO, Roboflow, Leaflet

- Built an AI-powered soil classification system capable of identifying crop recommendations based on soil analysis.
- Integrated GIS visualization for location-based soil monitoring and tracking.

CERTIFICATE AND AWARDS

- 1st Place – Programming Competition, Southern Leyte State University (2024, 2025)
- 2nd Place – Eastern Visayas Coding Olympics (C Language) (2024)
- Certificate of Participation – 8 Day Training Workshop on Artificial Intelligence (2026)
- Certificate of Participation – National Programming Challenge 2024 (CodeChum)
